## Review Procedure for Utah County Noxious Weed Certification

1. Landowner/Developer receives application and inspector list for Noxious Weed Certification from Utah County Public Works Community Development Division.
  2. Landowner/Developer contacts, typically by phone, an approved inspector from the application. Inspector reviews with the applicant:
    - a. The of cost of inspection
    - b. Inspection criteria and process (see item #4 below)
  3. Once the criteria and process has been explained the applicant can schedule an inspection or may address noxious weeds prior to scheduling the inspection.
    - a. Once the inspection appointment is scheduled the applicant is given the option to be onsite when the inspection is performed.
      - i. If Landowner/Developer does not wish to be present for the inspection and desires the inspection to be completed as soon as possible. The inspector will ask for permission to access property without setting a specific date/time, to allow the inspector the ability to inspect the property at the earliest available time.
  4. Inspection is performed.
    - a. A Property will not pass if a Class 1a, 1b, or 2 Utah State Declared Noxious Weed is found on the property.
    - b. Class 3 Utah State Declared Noxious Weeds are already widespread throughout most of Utah including Utah County. A property found to have Class 3 noxious weed may pass but approval will depend on the species, size, and density of the weeds present.
      - i. Russian Knapweed is a Class 3 Utah State Declared Noxious Weed but is not common in Utah County. If this species is found on the property, the inspection will fail.
      - ii. An inspection will pass if infestation is sparse and low in density.
      - iii. An inspection will fail if infestations are found throughout property and/or a weed covers approximately 10% or more of the property, weed coverage is an inspector's visual approximation of the infestation.
    - c. A Property found to have only Class 4 weeds present, will pass inspection.
    - d. For all inspections, the inspector will inform the applicant of all noxious weed species found on their property and a control treatment will be recommended.
- Note:** If multiple land parcels are included in the application, the inspection will be for the entire area, and will not be parcel specific; all parcels will either pass, or all fail together.
5. Once the inspection is complete the inspector will inform the landowner of inspection findings and results.
    - a. A passing inspection: The applicant will be asked to submit the application payment to Utah County Public Works.

- b. A failed inspection: The applicant will be informed of the inspection results and the specific noxious weeds identified on the property. They will be directed to make a control treatment. After a control treatment is made to infestation, the applicant may schedule an appointment for the re-inspection of the property.
- 6. Once a property has passed and payment for the Noxious Weed Certification has been received, the Utah County Weed Supervisor will email copy of receipt and a copy of the signed Noxious Weed Certification to the applicant.
